

LibNet[®]

Subscription management tool for electronic and printed journals

Subscription Management Services

LibNet® is a web-based tool designed to manage the complete life cycle of our customers' electronic and printed journal subscriptions. With LibNet® it is easy to place orders, claim and search for journal titles online from one single interface, easily with only few clicks.

LibNet® contains all of the most essential functions related to subscription management. You can search for journals, place new subscriptions, renew subscriptions, gather information about e-journals and licenses, perform journal check-in, print out circulation lists, place claims, order sample issues and create subscription reports in Excel and PDF -formats.

LibNet® is suitable for libraries, organizations and corporations of all sizes. The subscription module consists of more than 330,000 titles. You can get LibNet® in English, Swedish, Norwegian and Finnish.

Benefits for our customers

Advanced search – Journals can be browsed via basic or advanced search. The publication data includes a journal description, cover picture, name, price, ISSN number, frequency, current volume and information needed for licensing and registration of e-journals. The system also indicates whether or not the magazine has already been subscribed by the customer.

Subscribing– You can place your journal subscriptions online. LM Information Delivery's customer service processes and checks your subscription data before sending your subscriptions to the publishers.

Renewals – When you renew or update your subscriptions via LibNet®-subscription management tool your renewals are activated automatically - without delays caused by manual processing of the renewal forms. You will also get an automatic notification when your subscription period is up for renewal. The use of LibNet® reduces significantly the amount of processes related to subscription renewing.

Journal check-in – LibNet® includes a separate journal check-in -function. It is an efficient way for the libraries to manage their journal check-in and to gather all the necessary information to one place. You can also find the journal publishing schedule for tens of thousands of publications, announced by the publishers. LibNet® contains also publishing schedule information announced by other libraries (e.g. Library of Congress).

Claims – Via claims section you can place claims and monitor the processing and received responses regarding them. In this section you can view the entire handling process of your claim, including actions made by publishers.

Reporting –LibNet® also offers vast reporting possibilities. The reports can be tailored according to the requirements of each customer. The most common reports are the Subscription report, E-publication report, Price projection report, Claims report, E-publication availability report and the Frequency Report. Reports are available in Excel and PDF -formats.

Administrative accounts – A library can create several administrative accounts for its LibNet®-users. This way different authorization levels can be easily set according to the needs of different users. Additionally, it is easy to change e.g. your contact or invoicing information in LibNet®

LibNet® also includes

- Comprehensive publisher specific license information about the e-journals
 - Database of more than 13,000 table of contents regarding scientific publications and links to the full-text articles
 - Explicit copyright information about subscribed journals
 - Possibility to download MARC-records into the library system
 - Journal publishing schedule for thousands of journals, announced by the publishers
 - Connection to international and local journal databases; e.g. Library of Congress and PubMed.
- Links from the service can be tailored according to the customers' needs.
- 

LibNet® - additional services for e-journals

LibLicence® - license service for e-journals

LibLicence® enables you to find up-to-date license and user rights information for thousands of e-journals.

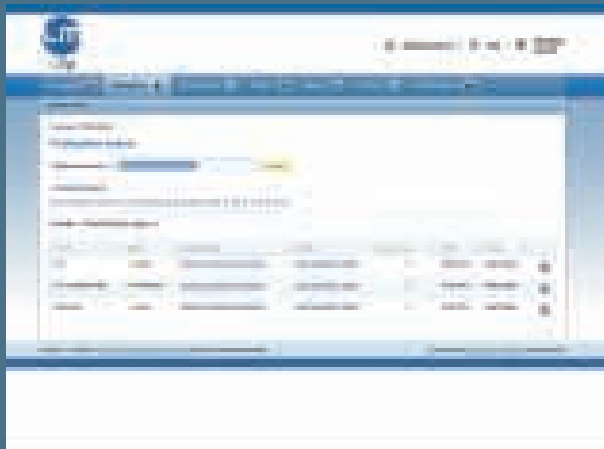

All the information is in a standardized format and therefore easy to compare. You can save your entire customer specific license information to the service, whether your collection contains individual journals or larger e-collections. LM Information Delivery collects continuously license information from international and local publishers and updates the information immediately to LibLicence® -service.

TOC- article service

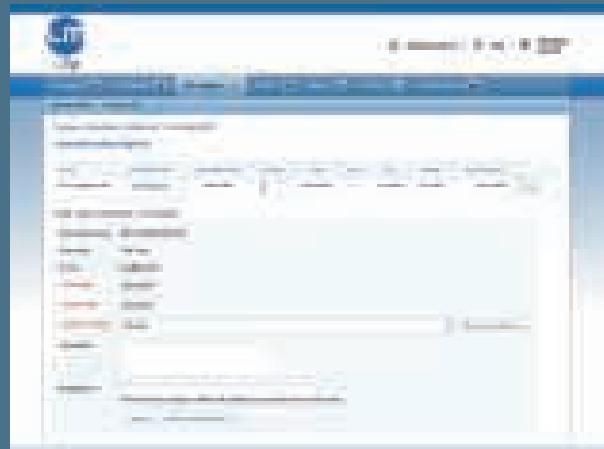

LibNet®-users can set up TOC Alerts on 13,000 titles to keep track of the latest articles. Via TOC-service the users can also order individual articles from over 54,000 publications. This service is an efficient tool for libraries and information services of all kinds. The TOC Alert delivers tables of contents to customer's inbox as they arrive from the publisher, based on journal titles pre-selected and entered into customer's TOC profile. Customers can then order the selected articles for an additional fee. The articles will be delivered to our customers by e-mail.
